

JA EUROPE ENTERPRISE challenge 2015

Belgium LJE	<p>BT-ASC</p> 		<p>A revolutionary product which is the EasyDriving by BT-ASC to fill these potholes easiest fastest and cheaper. A solution that is able to withstand 2 winters, applicable immediately as soon as the pothole is detected and regardless of weather conditions</p>
Belgium LJE	<p>Fondi</p> 		<p>A cosmetic company environmenally friendly which uses coffee grounds as its main ingredient.</p>
Belgium Vlajo	<p>Chick'In</p> 		<p>Chick'In is a team of five master students of industrial design engineering from the University of Ghent. Chick'In is a new company to enter the market of chicken coops. Chick'In provides products for chicken enthusiasts that transcend those of other manufacturers both in look and functionality. Chick'In aims to profile itself as a qualitative, customer based innovative company. The first product of Chick'In, Chick'In Modular is a direct illustration of these keywords. Chick'In Modular is a chicken coop that makes it possible for people to have chickens in urban environments</p>
Belgium Vlajo	<p>ICU</p> 		<p>Webcamhacking is an international problem. ICU's main goal is to raise awareness about the consequences of webcamhacking. It is important that people can protect themselves and their children. For this reason, ICU's team created an accessible and stylish webcamcover. This cover can be put in front of your webcam on your laptop or your tablet. From now on it is impossible for hackers to spy on you!</p>

<p>Bulgaria</p>	<p>Verde Design</p> 	 <p>Verde design" was founded on 12.12.2014 In Sofia by Viktoria Elenkova, Stefani Zgureva and Teodora Ivanova – students at the University of Forestry. The firm specializes in the design and construction of green spaces- public parks and private gardens, vertical landscaping and green roof design. The firm also aims to provide a positive contribution towards urban design starting from the smallest units. In this way step by step the image of the city will be improved. Vertical landscaping and green roof design are comparatively new to our country. Their application in big cities is gradually increasing and the partnership aims at being one of the lead firms which specializes in this branch of landscape design. The objective of the firm is to introduce a new type of product in the urban environment- bus stop “Viritas”. The design of the stop combines a practical structure which will satisfy the needs of people without creating difficulties with a green roof improving the conditions of the immediate environment. The green roof will take part in the assimilation of CO2 and the cooling of the air together with retaining dust. Furthermore it will increase the lifespan of the waterproof membrane and will protect the structure from external effects. The stop provides shelter from the wind and rain as well as ensuring a place to sit. It is also supplied with a ticket and information machine. The product is self-illuminated with consideration for its form and the comfort of the users.</p>

<p>Denmark</p>	<p>ElevAkademiet</p> 		<p>ElevAkademiet offers quality teaching, done by student teachers. The vision is to offer private tutoring, homework help and preschool, that motivates kids to learn. All the courses is based on one-to-one tuition.</p> <p>The activities unfolding in teaching are based on students' interests, skill levels and learning styles. Tuition can take place at home or in our classrooms. It is important, that the teachers employed in Elevakademiet are passionate about teaching, and have chosen the teaching profession as a career. The student teachers employed by ElevAkademiet are a part of a strong community, which allows them to change themselves and to improve professionally</p>
<p>Denmark</p>	<p>Gas2Green</p> 		<p>Gas2Green offers a solution to an increasing problem in the maritime sector, where the ships discharge waste material into the oceans, Gas2Green's solution will recycle this unused waste material.</p> <p>The idea is to use renewable energy to power an electrolysis cell in which to apply the scrubber-liquid (Waste-material) to produce hydrogen or biofuels, and thereby use the fuel to continue to produce electricity or propulsion. This should be made possible on the ships by installing an interactive system into which the dirty scrubberliquid can be applied and thereby converted, store and utilized as hydrogen.</p>

<p>Finland</p>	<p>Activer NY</p> 		<p>Activer is the next generation iPhone app that helps you find people who are interested in playing your favorite sport. Our native iOS, Android and Windows phone -application allows highly user-friendly experience to create and join different sporting activities. The way we will bring this service to people is largely focused on simplicity and user friendliness within the platform. Activer combines social networking with sporting.</p>
<p>France</p>	<p>Auparger</p> 		<p>AUPARAGER fight against food waste by transforming unsold gastronomic offer. This is done from the platform development AUPARAGER SHARING (restaurant and food truck) designed eco-system responsible for cooperation among all actors involved in food waste.</p>
<p>Greece</p>	<p>Blood-e</p> 		<p>Blood-e is an innovative information system about blood donation that automatically connects the donor to the hospital where it is needed. The innovation of this system is triple in uniqueness, usability and practicality that characterize it.</p>

<p>Italy</p>	<p>Budke</p> 		<p>“The Budke company is composed by four colleagues from the Scuola Superiore Sant'Anna of Pisa (Italy), all having a really strong academic background in Economics and Management. The team includes three Italians and one Polish student: Rachele Lasagna, Marco Levisaro, Alberto Parrella and Ewa Pinecka.</p> <p>Their start-up provides an e-commerce platform that facilitates the preparation and transport of liquids in hand luggage for air passengers. It lets the customer order a convenient box of cosmetics including all their favorite brands which they require for their trip, up to 24 hours before the flight. This can then be collected on arrival at their chosen accommodation. It is a fast and comfortable solution for a cozy traveling experience.”</p>
<p>Luxembourg</p>	<p>Cut&Go</p> 		<p>Visiting a hairdresser can sometimes be quite time-consuming. Apart from the time lost for the trip, you have to find a parking slot and sometimes wait until it's your turn. That's a lot of time that you could use for something else. That's why we want to offer you our service!</p> <p>With our fully equipped vehicle, we come to your place at the time that suits you best and provide a professional and comfortable haircut service where and when you want it. No more waiting time, no need to find a parking slot and, in addition, you can buy our accessory products like shampoos or other beauty accessories.</p> <p>Cut & GO, a unique concept with a professional service!</p>

<p>Malta</p>	<p>Bearn</p> 		<p>The goal of the company is to empower and instigate the conscience of its users to live an active lifestyle. The company aims to achieve this by providing a flexible and feature-rich service, whilst also creating a reward market whereby businesses can market their products and services to their target clientele. The Bearn Platform is designed for individuals as well as for businesses to build a more vibrant and connected corporate culture through physical activity. Individuals can already track their physical activity through various devices, and Bearn only tries to harness that technology to launch programs that inspire and motivate others to be more active through rewards.</p>
<p>Malta</p>	<p>HealthVend Ltd</p> 		<p>HealthVend Ltd was established to help address the alarming trend that people from an early age are starting to consume a considerable amount of junk food. The solution is to become an operator of vending machines supplying healthy snacks and beverages to local customers. The company will do its best to change this local stereotype, targeting initially younger generations, which will help tackle the root of the problem. Eventually the vending machines will be made available in high traffic locations in order to help individuals to opt for a healthy snack and eventually a healthy lifestyle.</p>
<p>Norway</p>	<p>CosyTech SB</p> 		<p>CosyTech is all about merging NFC mobile technology with social culture. We provide a platform and cutting-edge products to serve as brand a new communication channel for businesses to reach out to their customers.</p>

<p>Norway</p>	<p>Lotics SB</p> 		<p>Lotics SB: The dumping of nutrients by the fish farming industry is an unused resource and a huge environmental challenge. Lotics will create value by making the industry more sustainable by combining the fish farming industry with vegetable production in a closed system called aquaponics. We build and run aquaponic systems that utilise the plants' unique ability to absorb nutrients and cleanse water. The vegetables will be harvested, distributed and sold to the market</p>
<p>Portugal</p>	<p>SimplEngine</p>  		<p>Are you tired of the long queues to eat your homemade lunch that prevent you from enjoying your short lunchtime? We have the solution for you.</p> <p>HotBox is our innovative product that allows you to heat a meal anywhere you want. This way you can enjoy a warm meal and save time to relax during your lunchtime.</p> <p>HotBox is a food container equipped with a battery that provides heat to the meal, without relying on an external energy source. The heating system starts by pressing the button, which makes the product user friendly and safe. It also has a remote control through an android application that allows the user to start the heating process without the need of being near the HotBox.</p> <p>Its distinctive characteristics are unique in the market: portability, commodity and remote control. Let's put an end to the microwave queues</p>

<p>Portugal</p>	<p>Tangram</p> 		<p>"DIY SchoolBook" is the format that will revolutionize textbooks providing a significant reduction in the weight carried by students in their schoolbags. Textbooks cease to have the usual book spines. Their pages will have a special cutting - on the left side, which allows users (un)hooking them easily at small plastic.</p> <p>The DIY SchoolBook includes an additional folder with the same kind of plastic rings, where students put textbooks' pages/chapter they need each school day/week. We named it Fit Folder, trademark whose registration we are arranging.</p>
<p>Romania</p>	<p>VisionBot</p> 		<p>VisionBot Pick and Place is a machine that can facilitate the life of millions of electrical engineers and hobbyists, inventors, makers, European students and entrepreneurs to manufacture gadgets and Internet devices in their own house. Many great inventions and electronic devices remained at the prototype stage and disappeared because the creators could not afford to buy expensive factory machines or got refused by factories</p>
<p>Slovakia</p>	<p>Sitting Hamsters</p>  <p>Sitting Hamsters</p>		<p>Sitting in a wrong posture in front of a computer causes pain in the back, neck, head and it may lead to chronic disorders. It is a huge economic problem – every year 149 million man-days are lost and for every company it is very costly.</p> <p>Spine Hero is a real-time posture tracking application. Our main aim is to improve sitting habits of people with sedentary jobs. Spine Hero uses webcam to automatically detect quality of a user's sitting posture – it works either with a webcam or the Kinect sensors.</p>

<p>Spain</p>	<p>CtOS Enabler</p> 		<p>CtOS Enabler is a service in the Cloud that eases integrating geolocation in mobile apps and generates very useful statistical data for businesses. This data can be used to know the customers better and readjust according to that knowledge. It also provides developers with powerful geolocation tools to seriously reduce the amount of time spent building geolocation in their apps</p>
<p>The Netherlands</p>	<p>Stucoh</p> 		<p>When a child ends up in the hospital, everything is new. Think of the smell of a hospital, all the strange lights and beeps, seeing other sick children and grieving family members, not to mention the horrid drip connected to a crazy pouch that hangs over the bed. We have the solution: Manafuus! The Manafuus is a concept that consists of a hood that is placed to the infusion bag and a corresponding explanation map. The hood is supplied with stickers of well-known figures.</p>
<p>UK</p>	<p>Detour</p> 		<p>Detour aim to create products to help professionals be more comfortable, relaxed, happy, focused and productive, starting with the fll. resting device. http://www.flywithfli.com/</p>
